

Professional Summary

Senior Software Engineer with 10+ years of experience designing and developing scalable backend systems, API-driven applications, and enterprise software solutions. Experienced in building distributed systems, RESTful services, data-intensive applications, and cloud-enabled platforms using Java, Node.js, JavaScript, PostgreSQL, MongoDB, and modern web technologies. Strong background in object-oriented analysis and design, UML domain modeling, software architecture, and translating complex business requirements into maintainable, scalable technical solutions. Proven ability to lead projects from requirements through deployment, improve system reliability and performance, and deliver high-quality software through CI/CD, automation, and Agile development practices.

Core Competencies

Languages:	C, C++, C#, Java, Python, JavaScript, TypeScript, HTML, CSS
Frontend:	React, Bootstrap, Chakra UI
Platforms & Frameworks:	ASP.NET, Express, Node.js
API Technologies:	GraphQL, REST APIs
Database Technologies:	SQL, Oracle, MySQL, PostgreSQL, MongoDB, NoSQL
Testing & Automation:	Selenium, Cucumber, Appium, Playwright, TestNG, JUnit, REST Assured, TestComplete
Tools:	JIRA, GitHub, Postman, Insomnia
CI/CD & DevOps:	Jenkins, Bamboo, Docker, Jest, Cypress, GitHub Actions, CircleCI, Terraform
Software Design:	UML Domain Modeling, OOAD, Use Case Modeling
Architecture:	System Design, Domain Analysis, Software Architecture
Methodologies: Agile,	Agile, ICONIX, SDLC, BDD, TDD
Cloud Technologies:	Azure, AWS

Professional Experience

Founder / Chief Technology Officer

ZeroLedger – Minneapolis, MN | January 2025 – Current

- Designing and developing a full-stack application using React and Node.js for CO₂ footprint analysis and data-driven workflows
- Building backend services and REST APIs for data ingestion, validation, transformation, and system integrations
- Developing mathematical and statistical models to estimate and analyze CO₂ footprint across data workflows
- Implementing data validation and processing logic to ensure data accuracy and consistency across system operations
- Defining system architecture with focus on scalability, modularity, and performance optimization

Senior Software Engineer

Wells Fargo – Minneapolis, MN | March 2020 – April 2024

- Developed and validated backend services and APIs supporting large-scale, transaction-heavy financial systems with strict data integrity requirements
- Designed validation frameworks to ensure reliability and correctness across distributed system workflows spanning multiple services
- Built internal tools for data validation, API testing, and workflow orchestration across high-volume, multi-system environments
- Applied analytical problem-solving to identify system bottlenecks, optimize performance, and maintain data consistency under production load
- Integrated CI/CD pipelines enabling continuous delivery across distributed environments with frequent releases
- Investigated and resolved critical system issues affecting transactions, data consistency, and system stability in high-throughput production systems

Senior Software Technician

Stratasys – Eden Prairie, MN | September 2017 – December 2019

- Developed automated validation systems for industrial applications, improving reliability and data accuracy
- Built reusable components to support scalable testing and validation workflows
- Streamlined development and QA workflows through automation and tool integration
- Modeled validation workflows to ensure consistency across system components
- Trained engineers on automation tools and validation practices
- Recognized with a company Spark Award for performance and contributions

Software Technician

Rockwell Collins – Cedar Rapids, IA | January 2017 – August 2017

- Contributed to testing and validation of complex aircraft systems in Agile environments
- Supported development of internal tools and automated execution pipelines
- Configured environments for hardware and software integration

Lead Test Engineer

Remote Technologies Inc. – Shakopee, MN | March 2016 – September 2016

- Led testing for home automation systems integrating OEM and third-party hardware
- Designed and executed system-level test scenarios across control systems and interfaces
- Implemented test management processes improving tracking and execution
- Validated device communication workflows across integrated systems

Software Quality Assurance Technician

Carestream – Oakdale, MN | May 2015 – November 2015

- Performed validation of distributed medical imaging systems in compliance with FDA standards and regulatory requirements
- Conducted system-level verification for hardware and software releases
- Ensured reliability, consistency, and correctness of system outputs in production environments

Software Test Engineer

Xirgo Technologies Inc. – Edina, MN | September 2014 – March 2015

- Developed system-level validation for embedded communication platforms
- Implemented automated validation across distributed device communication workflows
- Supported debugging and issue resolution across system interactions and data flows

Education

Bachelor of Science in Computer Science (Minor in Industrial and Applied Mathematics) (Expected Dec 2027)
Metropolitan State University
Saint Paul, MN

Professional Full Stack Web Development Certificate
University of Minnesota
Minneapolis, MN

A.A.S in Computer Science & Foundations of Engineering (Electrical Engineering)
Normandale
Bloomington, MN
